## EDUCATION

### National Institute of Technology Jamshedpur

Master of Technology, Data Science and Engineering | CGPA:8.4

Coursework: Machine Learning, Deep Learning, Big Data Analytics, Natural Language Processing, etc.

Jamshedpur, Jharkhand

Aug. 2024 – May 2026

### IES IPS Academy

Bachelor of Technology, Computer Science and Engineering | CGPA:8.1

Coursework: Data Structure and Algorithm, Operating System, Database Management System, Computer Networking

Indore, Madhya Pradesh

June 2019 – July 2023

## EXPERIENCE

### SDE Intern

Sanas.AI

August 2025 – December 2025

Bangalore, Karnataka

- Resolved **50+** issues across frontend (**React**), backend (**NestJS**, **.NET Core**), and database (**AWS Aurora PostgreSQL**), significantly improving system stability and user experience.
- Fixed major security vulnerabilities including **SQL injection** and **JavaScript injection** by implementing parameterized queries, input sanitization, and schema validation using **Joi**, preventing potential data breaches.
- Optimized high-traffic analytics APIs by redesigning the **ClickHouse data architecture**, including **pre-aggregated, timezone-specific tables**, reducing expensive UTC-to-local conversions and lowering storage usage from **60GB to 21GB**, while improving query latency from **28 seconds to 2 seconds** on datasets exceeding **150K records**.
- Enhanced query efficiency by restructuring **ordering and indexing strategies** based on workspace grouping, significantly reducing scan overhead and improving fetch performance.
- Optimized backend performance using **Redis caching with TTL strategies** and monitored API health using **New Relic**, improving system reliability under high load.
- Developed and deployed multiple features involving frontend, backend, and database layers to enhance personalization and overall user experience.

## TECHNICAL SKILLS

- Programming Languages:** Java, Python, C/C++, JavaScript
- Web & Frameworks:** MERN Stack (MongoDB, Express.js, React.js, Node.js), NestJS
- Database Management Systems:** MySQL, MongoDB, AWS Dynamo DB
- Tools & Operating Systems:** Git, GitHub, Linux, Visual Studio Code, Postman
- Machine Learning:** Supervised Learning, Unsupervised Learning, Regression, Classification, EDA
- Data Science Libraries:** Pandas, NumPy, Scikit-learn, Matplotlib
- Core Competencies:** Data Structures & Algorithms, Problem Solving, System Design, RESTful APIs, Full-Stack Development, Internet of Things

## ACHIEVEMENT

- Solved **2500+** **DSA Problems** on different platforms like Leetcode, GFG, Coding Ninjas, etc. [Profiles](#)
- Top 4%** in contest rating of **Leetcode (Knight)**. [Link](#)
- Top 1%** in contest of **GeeksForGeeks (4 Stars)**. [Link](#)
- Top 3%** in contests of **Coding Ninjas (Master)**. [Link](#).

## PROJECTS

**TaskUno** | *FastAPI, React, TypeScript, Supabase* | [Live](#) | [Backend](#) | [Frontend](#)

Nov 2025

- Built a **full-stack Jira-like project management platform** using **FastAPI**, **React**, and **Supabase**, following a clean **three-tier architecture**.
- Deployed the backend on **AWS EC2** and frontend on **Vercel**, using **Dockerized microservices** with **Nginx** as a reverse proxy.

- Integrated **Redis** for caching and implemented **queue-based email processing** to improve performance and reliability.
- Implemented **CI/CD pipelines using GitHub Actions** for automated builds, testing, and seamless deployments.
- Developed **JWT-based authentication, role-based access control**, Kanban boards, task management, and a fully responsive UI.
- Integrated **New Relic APM** with **Dockerized microservices** to monitor API performance, latency, error rates, and system health, gaining hands-on experience in **observability, debugging, and performance optimization**.
- Planned future enhancements including **rate limiting**, improved **security headers**, and **Kubernetes-based horizontal scaling**.
